

RF

# Ryan Felter

## Professional Summary

Flourishing Full Stack Developer with a true passion for constructing websites and apps and enhancing current projects to increase the ease of use for both provider and consumer. Frequent attendee of technological events and national competitions.

## Experience

Code AutoMobilityLA Hackathon: Peek A Queue - Full Stack Developer

Los Angeles, CA

11/2018 - 11/2018

- Created an in car application using JavaScript, Node.js, and React.js, and Express.js in under 36 hours
- Created a Google Maps navigation component using coordinates gathered with Visa's location API in conjunction with GM's location and destination APIs
- Utilized Visa's Merchant Queue API to find various businesses and their checkout line wait times.
- Wrote back end controllers and services allowing usage of VISA and GM APIs

Eleveight Inc - Full Stack Developer

Irvine, CA

09/2018 - Current

- Implemented middleware and back end servers with Node.js, Express.js, JOI, and SQL Server to develop APIs
- Created dashboards/landing pages giving logged in users quick access to, connections, messages/chats as well as track collected statistics
- Created a reusable web scraping component using Puppeteer which allowed users to scrape metadata and create, read, update, and delete the results
- Created a Redux component which gathered and stored all data needed once logged in.
- Implemented React Router's authentication redirect features to maintain a level of front end security
- Communicated progress with team through Trello boards and Git on Team Foundation Server for code and peer reviews. Daily stand ups, product demos and sprints using Agile Methodology
- Wrote SQL queries to create, read, update, and delete people, businesses, as well as funding sources
